## ABOUT ME

Software Engineer with two years of experience in fullstack development. I specialize in building innovative and robust web and mobile applications, integrating a captivating frontend design with a solid and optimized backend. My commitment focuses on code quality and active collaboration, using my communication and problem solving skills to achieve this. I constantly seek new challenges to apply and expand my knowledge, delivering solutions that not only meet, but exceed expectations.

## EDUCATION

**Universidad Católica Andrés Bello**                                           Sep 2018 - 2025
*Software Engineer*

**Unidad Educativa Colegio Dulce Nombre de Jesus**                                           2015
*High School*

## WORK EXPERIENCE

**Avila Tek**                                                                   **Jul 2023 - May 2025**
*Software Engineer*

As a Software Engineer with solid knowledge in web development. I have actively participated in projects such as the implementation of a payment gateway (checkout) and the development of a comprehensive web platform for customer management, transactions and accounting. Optimizing, redesigning and improving processes to streamline the operations of a capital management company.

Also, I have solid knowledge in Git and Github, Figma, agile methodologies such as scrum and experience in continuous development and versioning. Both projects in which I actively participated and collaborated as a frontend developer were successfully taken to a production environment. Implementing best practices and always looking for continuous improvement of the code base.

- Creating reusable components
- Development of payment flows
- CommerceTools integrations
- Integration with backend development to arrive at optimal solutions
- User session management and permissions
- Development of transaction creation and editing flow, transaction tracking and customer account status

## SKILLS

**Programming Languages**                                                       **Technologies**

JavaScript, Typescript, Python, Java, Dart          React.js, Node.js, Next.js, Nest.js, Angularjs, React Native, Flutter, MongoDB, SQL, GraphQL, REST, TailwindCSS, Git, GitHub, Algolia
